

GEL-COATED OIL ABSORBING SKIN WIPES

Abstract of the Disclosure

- 5 An oil absorbing wipe material suitable for wiping a users skin comprising an oil
absorbing porous substrate having a transparency of less than 65 percent which porous
substrate changes transparency upon absorption of facial oil, said porous substrate having
a nontacky flexible coating on at least a portion of at least one face said coating
comprising a film forming polymer with at least one additional additive which coating is
10 visible on the coated face of the porous substrate and which coating does not penetrate to
the opposite face of the porous substrate.
